

Commencement Bay Nearshore/Tideflats Generalized Timeline

Current as of November 2002

Notes:

1. Restrictions on in-water work not shown
2. Some design and cleanup activities overlap, so design for one activity (e.g. intertidal cleanup) may continue while other activities (e.g. channel dredging) are underway
3. Monitoring may include monitoring of cap integrity, natural recovery, disposal sites, mitigation, and five-year reviews
